

Product Requirements Document (PRD)

Cosmic Inbox

Product Name

Cosmic Inbox

Category

Thinking tool + creator workflow

Platform

Mobile-first (iOS / Android)

Web secondary

1. Product Overview

Cosmic Inbox is a **private thinking inbox** where users capture messy thoughts and turn them into clear insights and publishable ideas.

People capture ideas in scattered places:

- Notes apps
- Voice memos
- WhatsApp chats
- Screenshots
- Notebooks

These thoughts get stored but rarely processed.

Cosmic Inbox transforms raw thoughts into:

- insights
- ideas
- stories
- posts
- business strategy
- creative content

The product helps users move from **spark to signal to expression**.

2. Product Vision

Most note apps store thoughts.

Cosmic Inbox helps users **develop thinking**.

The app acts as a **thinking companion** that helps people:

capture ideas
clarify meaning
develop insights
express ideas
create content

The experience should feel like a **private intellectual library**.

3. Core Product Loop

The product revolves around a simple loop:

Capture → Clarify → Express → Create

Capture

User captures a spark of thought.

Clarify

AI helps organize and clarify the idea.

Express

User explores ways the idea could be expressed.

Create

User prepares and publishes content externally.

4. Product Philosophy

Cosmic Inbox is not a productivity tool.

It is a **thinking tool for creators, founders, and curious minds.**

AI supports thinking but **does not replace it.**

The user remains the thinker and decision maker.

The system should **clarify ideas**, not automate creativity.

5. Target Users

Primary Users

Creators
Writers
Journalists
Founders
Entrepreneurs
Strategists
Thought leaders

Secondary Users

Spiritual thinkers
Journaling enthusiasts

6. Core Features

Feature 1 – Capture Engine

The Capture Engine allows users to instantly drop a spark.

Capture Methods

Voice note
Text entry
Image upload
Link capture (future feature)

Design Goal

Capturing a spark should take **less than 5 seconds**.

Example Spark

User records:

“Entrepreneurs try to scale systems before clarifying their message.”

This becomes a **Spark**.

Feature 2 – Clarify Engine

After capture, the system helps clarify the spark.

The purpose is to **organize messy thinking into clearer signals**.

AI helps by:

- transcribing voice notes
- summarizing the thought
- identifying the core idea
- categorizing the spark

The goal is clarity, not interpretation.

Spark Categories

The AI identifies the type of thought.

Example categories:

Insight
Lesson / Learning
Quote
Content Idea
Story Seed
Business Idea
Task / Reminder

Users can change categories if needed.

Feature 3 – Spark Library

All sparks are stored in a personal library.

This library acts like a **collection of books of thinking**.

Example sections:

Insights
Content Ideas
Business Ideas
Quotes
Story Seeds
Tasks

Library Features

Search sparks
Open sparks
Edit sparks
Re-categorize sparks
Archive sparks

Feature 4 – Signal Detector

The system identifies patterns across sparks.

Example insights:

“You’ve captured 5 ideas related to leadership.”

or

“These sparks appear connected.”

This helps users identify:

- recurring themes
- idea clusters
- evolving thinking
- intellectual identity

The goal is to help users discover **what they keep returning to**.

Feature 5 – Spark Revival

The system resurfaces older sparks that might still be valuable.

Example prompts:

“You captured this idea 7 days ago.”

“This might make a good LinkedIn post.”

“You now have 3 related sparks.”

This helps prevent ideas from being forgotten.

Feature 6 – Expression Engine

Users explore ways to express a spark.

The system suggests possible formats but does not fully automate the process.

Examples:

- Quote
- Caption
- Article idea
- Thread
- Carousel concept
- Talk outline
- Newsletter topic

The user selects the direction.

The goal is **creative exploration, not automated writing**.

Feature 7 – Creator Engine

The Creator Engine helps users turn sparks into ready-to-publish content.

This phase focuses on **content preparation**.

Examples:

- Instagram caption formatting
- LinkedIn post structure
- Thread outline
- Quote graphic generation

Users maintain control of the final output.

Feature 8 – Publishing Engine

Users can export or publish content to external platforms.

Supported platforms may include:

- Instagram
- LinkedIn
- X (Twitter)
- Newsletter platforms
- Blog platforms

Capabilities may include:

- Copy export
- Image export
- Direct publishing (future phase)
- Scheduling

7. Product Phases

Phase 1 – Capture + Clarify MVP

Goal:

Build a working loop that converts raw thoughts into usable insights.

Features:

- Capture (voice/text/image)
- Transcription
- AI summary
- Spark categorization
- Spark library
- Basic post generation

Success criteria:

Capture → clarify → category → post draft works reliably.

Phase 2 – Creator Engine

Goal:

Turn sparks into ready-to-use content.

Features:

- Quote generator
- Multiple caption formats
- Content pillar tagging
- Spark resurfacing
- Idea clustering

Phase 3 – Publishing Engine

Goal:

Turn Cosmic Inbox into a full creator workflow.

Features:

- Quote graphics
- Content scheduling
- Direct publishing
- Content calendar
- Performance analytics

8. Core User Experience

The key moment in Cosmic Inbox occurs when:

A messy thought becomes something useful.

Example flow:

User speaks:

“Entrepreneurs try to scale systems before clarifying their message.”

App returns:

Summary

Entrepreneurs often try to scale before their message is clear.

Category

Insight → Business

Options

Turn into Post

Save Spark

Generated Post

“Most founders try to scale before their message is clear.

But clarity is what actually creates momentum.

Before building systems, validate the message.”

9. Design Principles

The interface should feel calm and contemplative.

Inspired by:

Libraries

Idea journals

Creative studios

UI qualities:

minimal

elegant

thoughtful

quiet

10. Suggested Tech Stack

Frontend

React Native

Backend

Supabase

AI

OpenAI API

Authentication

Google login

Apple login

Email login

Storage

Supabase database

11. Monetization

Freemium model.

Free Tier

Unlimited sparks

Basic clarification

Paid Tier (\$8–12/month)

Advanced signal detection

Idea clustering

Content generation tools

Publishing features
Analytics

12. Success Metrics

Daily sparks captured
Clarification rate
Spark → expression conversion
Spark → published content conversion
User retention

13. Product Positioning

Cosmic Inbox is a **creator-first thinking tool**.

It helps creators and founders turn spontaneous thoughts into organized ideas and publishable content.

The core experience:

Messy thought → clear idea → expressive content.
